

A cross-sectional view of a mechanical assembly. The assembly consists of a main body (1) and a cover (2) that fits over it. The cover (2) has a flange (4) that rests on a surface. The main body (1) has a central cavity (3) with a top flange (6). Inside the cavity, there are two rectangular components (5) labeled 'NS'. These components are held in place by a series of interlocking parts: a top plate (8) with a central hole, a middle plate (7) with a central hole, and a bottom plate (10) with a central hole. The top flange (6) of the main body (1) is secured by a bolt (6a) that passes through the top flange and the top plate (8). The bottom plate (10) is secured by a bolt (5) that passes through the bottom plate and the bottom flange of the main body (1).
